

## Installation Instructions: AO Inspector

**Please Note:** Installation must be done using the QSECOFR profile. Failure to do so may cause the installation to fail.

1. Download the required zipped save file from the web site onto your local desktop or laptop.
2. Using the WRKLNK 'adsero' command, check that the Adsero directory exists on your IBMi and if not create one using the CRTDIR DIR('/adsero').
3. If the directory exists delete all .zip and .savf instances of the same name as the downloaded file.
4. Transfer the downloaded file into the /adsero directory on your IBMi. There are a number of different ways of doing this;
  - a. Using Windows FTP to PUT the file into /adsero on the IBMi
  - b. Use the copy/paste functions of RDP to copy from the local PC to the IBMi.
  - c. Use a 3<sup>rd</sup> party product, such as FileZilla to transfer the file.
5. Once the file is on the IBMi, unzip the file as follows;
  - a. Type "QSH", on a command line, to enter QSHELL.
  - b. Type "cd /" and press enter.
  - c. Type  
jar -xvf /adsero/AOIVnRnMn.zip  
where "n" is the version, release and modification of the downloaded file. i.e. "AOIV3R3M0"
  - d. Press F3 to exit QSHELL
  - e. The downloaded file is now unzipped to "AOIVnRnMn.savf".
6. Create a save file in QGPL using the following command  
CRTSAVF FILE(QGPL/ AOIVnRnMn)  
if it does not already exist.
7. On a command line, type  
CPYFRMSTMF FROMSTMF('/adsero/ AOIVnRnMn.savf') TOMBR('/qsys.lib/qgpl.lib/ AOIVnRnMn.file')  
MBROPT(\*REPLACE)  
to load the save file.
8. Once the above steps are completed, you may then install the product using the following command;
  - a. RSTLICPGM LICPGM(0AOI540) DEV(\*SAVF) SAVF(QGPL/ AOIVnRnMn)
  - b. Once installed the AO Inspector may be started by typing "AOI" on a command line.  
No license is required for the AO Inspector.
