Database & Application - Design & Development

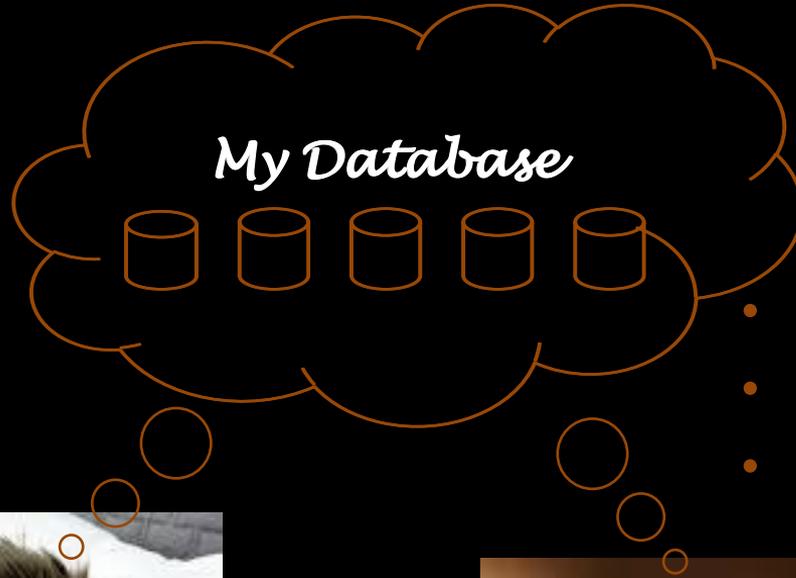

The best thing
about me...

I'm a limited
edition.

There are no
other copies!

Bet you're thinking
thank the good lord!

Database & Application - Design & Development

A person is painting a red wall in a corner. The person is wearing light-colored pants and dark shoes. A can of red paint is on the floor next to them. The floor is white, and the wall is red. The person is standing on a small white patch of floor that is shaped like a triangle, with the hypotenuse of the triangle being the edge of the red wall. The rest of the floor is red, matching the wall. The person is holding a paintbrush, and the can of paint is open. The scene is a humorous take on the idea of starting a project without knowing how to finish it.

VIA 9GAG.COM

Before you start
anything, learn
how to finish it.

*BEFORE Triggers

- Data Validation
- Program Access Check
- Default Provision
- Relationship Checking
- Etc. Etc. Etc.

**A Maximum of 300
Trigger Programs are
allowed per file/table**

**Order of Execution: Ordinal number of
event determined when trigger
definition is added to the file**

0. I can't fix this
1. Crisis of confidence
2. Questions career
3. Questions life
4. Oh it was a typo, cool

Triggered Programs

Referential Constraints

Activation Groups

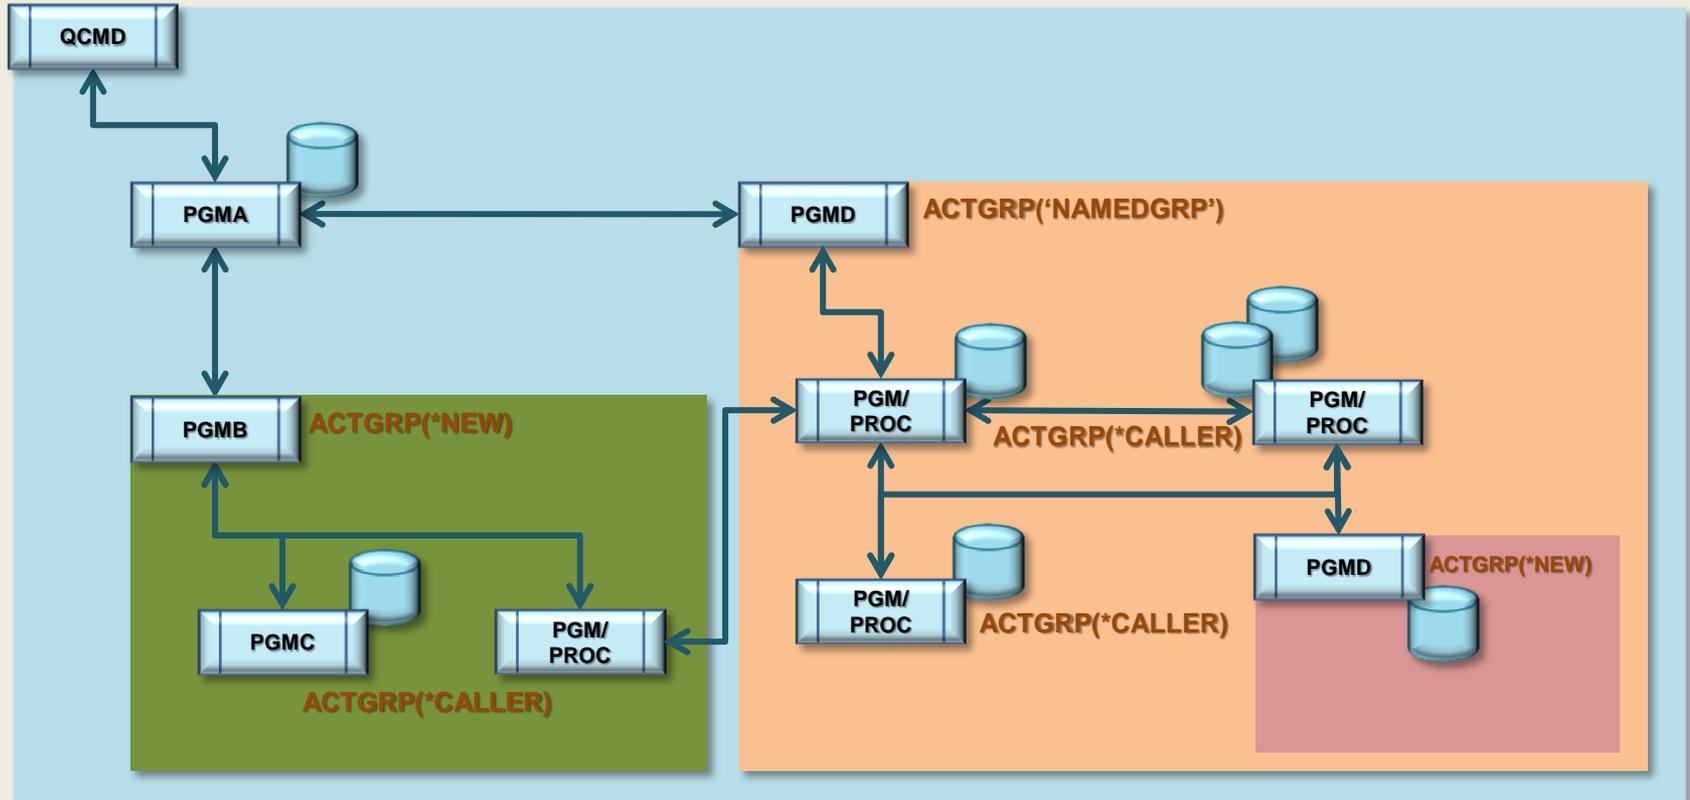

*DFACTGRP

QCMD

- When a job is started on the IBMi, a *DFACTGRP (DAG) is created, and it cannot be terminated except by ending the job. The DAG is where all original OPM program objects run as well as all OS functions.
- In addition, limited-function RPG IV programs can run in *DFACTGRP. Limited function is defined as programs that don't contain any procedures, don't call any procedures, and use no contemporary built-in functions (BIFs) as well as any features that require procedures not supported by *DFACTGRP.

Activation Groups

*DFTACTGRP (DAG)
